                     RESULT 6
A57519
parathyroid hormone receptor 2 precursor - human
N;Alternate names: PTH2 receptor
C;Species: Homo sapiens (man)
C;Date: 08-Dec-1995 #sequence_revision 08-Dec-1995 #text_change 09-Jul-2004
C;Accession: A57519
C;Date: 270, 18-255-18458, 1995
C;Accession: A57519
A;Title: Identification and functional expression of a receptor selectively recognizing
A;Title: Identification and functional expression of a receptor selectively recognizing
A;Reference number: A57519; MUID:95318121; PMID:7797535
A;Title: Identification and functional expression: A57519
A;Status: preliminary; mucleic acid sequence not shown
A;Accession: A57519
A;Status: preliminary; mucleic acid sequence not shown

-! FUNCTION: This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by g proteins which activate adenyly! cyclase and also a phosphatidylinositol-calcium second messenger system.
-! SUBCELLULAR LOCATION: Integral membrane protein.
-! SINILARITY: Belongs to the G-protein coupled receptor 2 family. SEQUENCE FROM N.A.

Incompose the mouse parathyroid
Incompose Sci. U.S.A. 91:5051-5055(1994).
Incompose This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by groteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system.
Is SUBCELLUAR LOCATION: Integral membrane protein.
Is SUBCELLUAR Expression of the G-protein coupled receptor 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAIN=C3H/HEHA;

"A mutant PTH/PTHrP type I receptor in enchondromatosis.";
I.A. Genet. 30:306-310(2002).
I. FUNCTION: This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by g proteins which activate adenylyl cyclase and also a phosphatidylinositod.-calcium second messenger system.

C. I. SUBCELLULAR LOCATION: Integral membrane protein.
C. I. TISSUE SPECIFICITY: Expressed in most tissues. Most abundant in Kidney, bone and liver.

C. I. DISEASE: Defects in PTHRI are the cause of Jansen's metaphyseal chondrodysplasia (JMC) [MIN:156400]. JMC is a rare autosomal dominant disorder characterized by a short-limbed dwarfism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           dysplasia.

DISEASE: Defects in PTHR1 can be a cause of enchodromatosis [MIN-166000]. Enchondromas are common benign cartilage tumors of bone. They can occur as solitary lesions or as multiple lesions in enchondromatosis (Ollier and Maffucci diseases). Clinical problems caused by enchondromas include skeletal deformity and the potential for malignant change to osteosarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pean Bioinformatics Institute. The activity of this receptor is mediated by groteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system.
-!- SUBCELLULAR LOCATION: Integral membrane procein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 2 family.
                                                                                                                  360 VPILASIVLNFILFINIVRVLATKLRETNAGRCDTRQQYRKLLKSTLVLMPLFGVHYIVF

-!- FUNCTION: This is a receptor for parathyroid hormone and for parathyroid hormone-related peptide. The activity of this receptor is mediated by g proteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system (By

The present sequence represents a mutant parathyroid hormone (PTH) receptor, designated rdeltaNt. The polypeptide is characterised by a deletion of the extracellular amino-terminus ligand binding domain. The receptor has a minimal domain for ligand binding and is, therefore, useful in screening assays designed for the identification of agonists

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tetherl activity, increasing CAMP on ammmalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH-P which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                325

Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells expressing the receptor are used for diagnostic measurement of PTH serum levels. (Updated on 25-MAR-2003 to correct PF field.)

The receptor a G-protein linked receptor having 7 transmembrane domains. It induces an increase in intracellular cAMP and calcium upon challenge with PTH or PTHFP.

                                            This sequence represents the rat parathyroid hormone (PTH) receptor R15B, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is eseful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia

The invention relates to parathyroid hormone (PTH) receptor and its corresponding nucleic acid sequence. The parathyroid hormone receptor polypeptides, polymucleotides and antibodies are useful for diagnosing, prognosticating and treating disorders associated with parathyroid hormone receptors, e.g. hypercalcaemia, hyperparathyroidism, osteoporosis, carcinomas of the breast, lung and prostate, epidermoid cancers of the head and neck of the osophagus, multiple myeloma, or hypocalcaemia. The DNAs and polypeptides are also useful for screening candidate compounds for antagonistic or agonistic effects on parathyroid hormone receptor activity. The compounds are also useful in manufacturing diagnostic agents used as diagnostic tools to diagnose hypercalcaemia and to distinguish between hypercalcaemic conditions. The present sequence is rat bone PTH/PTHFP (PTH-related protein) receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           modulates its activity is useful for preparing a medicament for treating

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodabling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large mative PTH or PTH-rP which avoids the need for regular injections to treat osteoporosis
linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                          Claim 22; Fig 10; 119pp; English

Claim 151; SEQ ID NO 731; 542pp; English.

The invention features to internal and mouse by procedure and nucleic acids encoding them. The invention features to internal to the GPCR proteins and nucleic acids of treating, preventing or diagnosing diseases as sesociated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic moutation in a GPCR agene of the invention, a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived a mutation in a different GPCR polyucleotides of the invention. The curvation in a different GPCR polyucleotides of the invention. The invention is and with comprising a GPCR mucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR polypeptides and vectors depression, diabetic neuropathy. Parkinson's disease or schizophrenial; disorders of the adrenal gland; disorders (e.g., Alzheimer's disease, Ge.g., andionally and advanced in disorders of the colon or intestine myocardial infarction); muscular disorders (e.g., autoimmune disorders or myocardial infarction); muscular disorders; blood disorders (e.g., autoimmune disorders or this presset) and disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., ansemia or leukaemia); immune disorders (e.g., autoimmune disorders), uterus, prostate, teetis, invention relates to human and mouse G protein-coupled receptors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The rat bone parathyroid hormone/parathyroid hormone related protein

(PTH/PTHrP) receptor protein sequence was deduced from clone R15B obtd.

(PTH/PTHrP) receptor protein sequence was deduced from clone R15B obtd.

(By sereening a rat oseeoaarcoma (R0S) cell colmba library to isolate those expressing functionally inteact PTH/PTHrP receptor proteins, performed according to Gearing et al., (RMBO J. 8: 3676, 1989), by identifying according to Gearing et al., (RMBO J. 8: 3676, 1989), by identifying of protein may be used in a therapeutic compan. to inhibit activation of PTH or PTHrP and thus reduce the level of calcium in the blood. Opds. capable of competing with PTH or PTHrP for binding can be identified using the cortein and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia. See also AAR27704-16. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                    Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large mative PTH or PTH-PTP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AVLYSGFTLDEAERLTEEELHIIAQVPPPPAAAAVGYAGCRVAVTFFLYFLATNYYWILV 156

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTH; parathyroid hormone; conjugate; bone mass; bone reformation; PTH-1 receptor; resorption; remodeling; tether1; osteoporosis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is a portion of PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large mative PTH or PTH-P which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                 New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTH; parathyroid hormone; conjugate; bone mass; bone reformation; PTH-1 receptor; resorption; remodeling; tether-R11; osteoporosis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHIP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  169

The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia

                                                                                              Identifying agonists of G protein-coupled receptors (GPCRs) for use in disease treatment, comprises contacting candidate compounds with versions
                                                                                                                                                                                                                                                                                               The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disorders associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                     435
